

Thickness sander plans

These plans are based on [Pat Hawley's thickness sander](#). Please note that I have not built this sander myself, but I know the design works from Pat's sander. Unlike some of my other [woodworking machine plans](#), I didn't actually build this sander myself, so it wouldn't be right to charge for them.

Frame

The whole frame is just screwed together from 2x4's. Four 8' 2x4's should be enough, but it may be better to buy two 8' 2x8's to get better quality lumber.
